FACIAL PLATING SYSTEM

Complicated Procedures,
Complete Solutions.

ICON

FACIAL PLATING SYSTEM

The **ICON** Facial Plating System is OsteoMed's next generation CMF surgical solution. **IMPROVED** features include simplified instruments and upgraded angled locking implants. **CUSTOMIZABLE** plate and screw modules enable you to configure the system for specific customer requirements. **OPTIMIZED** design features, such as the built-in auxiliary mesh tray and utility tray, offer space to include larger meshes, orbital floor plates, and optional instrumentation. The entirely **NEW** case design and graphics provide an aesthetic appearance to complement this complete system for complicated procedures.

ICON

FACIAL PLATING SYSTEM

Indications

1.2mm

The standalone 1.2mm Plating Module includes plates, screws and accessories that are needed for use in craniofacial fractures. This optional module can be housed in the Utility Tray, underneath the Instrument Racks.

1.6mm

The versatile 1.6mm Plating Module can be customized to meet a variety of surgical needs including craniofacial trauma fractures and orthognathic procedures. With a screw block and three plate trays with removable identification tags, this module can be an optimized surgical solution to each customer.

2.0mm

Like the 1.6mm Plating Module, the 2.0mm Plating Module includes three customizable plating trays and a screw block to tailor the module to the surgeon's specialty. Specifically, it offers more rigid plating options for craniofacial trauma, mandibular trauma and orthognathic procedures.

2.0mm/2.4mm

The 2.0mm/2.4mm Angled Locking plating module incorporates OsteoMed's state of the art locking technology allowing all plates to accept either 2.0mm or 2.4mm angle locking screws. Plates in 1.0mm, 1.5mm and 2.0mm thicknesses are housed in this module, allowing for complete solutions no matter the clinical need.

Recon

The optional Angle Locking Recon Module contains 2.8mm thick plates to provide optimal plate strength for maximum mandibular reconstruction fixation. Additionally, all recon plates will accept either 2.0mm or 2.4mm diameter screws for improved patient outcomes.

Improved

Rethinking Possibilities, Reshaping Lives

New Angled Locking Plates Plate-Screw Interface

- Angled Locking Fracture and Reconstruction Plates will accept either 2.0mm or 2.4mm screws
- Surgeon can choose diameter best suited to patient anatomy
- Improved outcomes for edentulous patients
- Offers surgical options for the irradiated or elderly patient

Simplified transbuccal system

- Less parts to account for in the set
- Minimizes lost inventory in sterile processing
- Less confusion in Operating Room
- Easier assembly for scrub techs

Built-In Utility Tray

- Large enough to include universal plate bender
- Optional 1.2mm plating block will fit inside utility tray
- Conveniently located under Instrument racks
- Additional mesh storage area

Customizable Plating Modules

- Modules may be customized by account
- Allows for inclusion of new plates
- Optimizes inventory
- Eliminates the need to have inventory in the set that is never used

Lighter Weight

- Reduced overall weight of populated set
- Responsive to RN and SPD inventory weight requirements
- Lighter case to carry when servicing accounts

Customizable

Rethinking Possibilities, Reshaping Lives

Removable/Replaceable Plate Tags

- Snap-in tags to identify plates in generic pockets
- Plate ID tags have P/N and description
- Plate ID tags are color-coded based on screw diameter interface

Removable/Replaceable Screw Tags

- Allows for placement of different lengths and types of screws based on account
- Remove or add screws based on usage

Custom Name Plates

- Snap-In tags for lid and front of ICON set
- Provides option to custom label system
- Assists OR staff with identification of what is in the set

Optional 1.2mm and Reconstruction Plating Modules

- Optimized inventory
- 1.2mm Plating Module fits into Utility tray
- Reconstruction Plating Module available upon request for planned cases

Optimized

OSTEOMED
CRANIOMAXILLOFACIAL

Rethinking Possibilities, Reshaping Lives

NEW Trocar System

- One-Piece Handle and Cannula
- Locking and Neutral Drill Guides
- Ergonomic Handle Design
- New Quick-Connect U Shaped Cheek Retractor
- Trocar can be Used On-bone or Aligned with Screw Holes

Auxiliary Mesh Drawer

- Ideal for Larger CMF Meshes
- Suitable for New Orbital Floor Plates
- Conveniently Accessible in ICON Case

Utility Tray

- Located Under Instrument Racks
- Accepts Optional 1.2mm Plating Module
- Will Accommodate Universal Bender
- Perfect for Add-on Instrumentation

Reduced Weight

- Lighter Weight for Hospital Staff
- Easier for Sales Team to Carry
- Responsive to RN/SPD Product Requirements

OSTEO MED
CRANIOMAXILLOFACIAL

Rethinking Possibilities, Reshaping Lives

NEW Orbital Floor Plates

OsteoMed has expanded its Orbital Floor Plate offering to include three new shapes - anatomical "guitar pick", fan and preformed. Each of these shapes is available in various thicknesses - .2mm-.5mm in both 1.2mm and 1.6mm options.

NEW Angled Locking Reconstruction Plates*

Surgeon designed to meet requirements for thicker reconstruction plates, the system offers 2.8mm thick recon plates in straight, hemi, and condyle-to-condyle patterns. The system also includes 2.0mm thick reconstruction plates in response to the head and neck specialists who prefer strength without compromising vascularity when using grafts. Both the 2.8mm and 2.0mm reconstruction plates accept either 2.0mm or 2.4mm screws.

NEW Enhanced Instrumentation

Less is more. OsteoMed has streamlined and enhanced our instrumentation to reduce surgical field clutter and improve surgical efficiency. With a more compact and easy to use trocar system, more robust multi-function bender and hex shank driver handle, we have the user-friendly instrumentation necessary for all CMF procedures.
